

Membership Pack 2009

The Centre for Organic & Resource Enterprises (CORE) is an international research and marketing network for participants in the sustainability sector. On behalf of our public and private sector members and collaborators, CORE specialises in technical and market development programs for products, technologies and systems related to organics, bio-materials and recovered resources. Our programs with members and collaborators link stakeholders through the supply chain in order to maximise demand potential.

CORE assists members and collaborators to create viable and sustainable long term markets. CORE also researches and provides solutions to the technical, economic and logistical barriers that inhibit the uptake of products, technologies and systems.

Because CORE membership is cross sector and supply chain driven, CORE links the network members together to gain mutual benefit. Since 1997, CORE has assisted members and collaborators to achieve more sustainable outcomes.

In addition to the range of benefits shown below, CORE has established the *CORE Collaborators Club* for those who wish to become more involved and partner on sustainability initiatives.

Collaboration | **Research & Development** | **Advocacy** | **Marketing**
